

Changeover light switch CL60060

Dear Customer,

This changeover light switch was specially developed for large engines.

The changeover light switch enables you to fit engines and/or control trailers with alternating lighting. Please note that the changeover light switch is not suitable for use with digital components!

Packaging contents

1 board with installation
instructions
1 electronic component

Technical data:

Supply with d.c. voltage!
Input: 0-24 volt = (d.c. voltage)

Each exit (front + back) can be loaded with a maximum of 5 incandescent lamps.

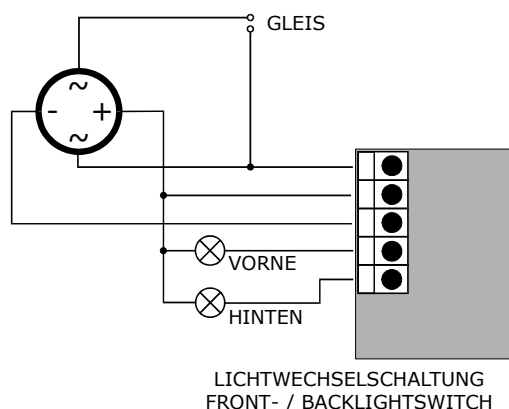

Note:

Please read the following description carefully before starting with the installation. **CE** Not suitable for children under 14 years. Contains small parts. Improper use may cause injuries through functional sharp edges and points. Please retain these instructions for use!

Retrofitting/installation:

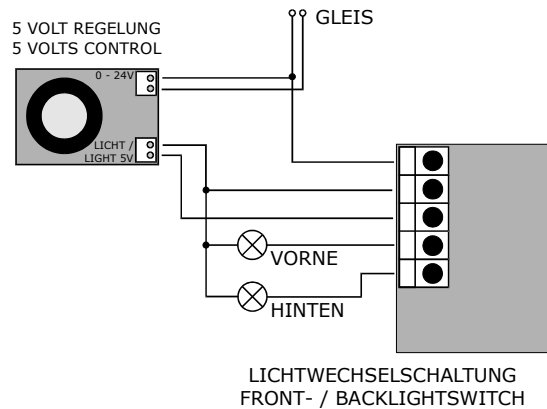

Connect the module as per the enclosed drawing.

1. Retrofitting/installation using 19-24 volt incandescent lamps:

2. Retrofitting/installation using 5 volt incandescent lamps with component CL 60063

With this variant, you can also use 5 volt incandescent lamps when purchasing the 5 volt voltage stabiliser, CL60063. By means of voltage stabilisation, the lamps light up constantly from a travel voltage of around 5 volt.

Should you discover a fault in the fabrication despite a careful final inspection, please return this item to your dealer, together with a description of the fault and your receipt, or send the component directly to us. Any charges relating to the return of this item will have to be borne by you! You will find us on the Internet under <http://www.champex-linden.de>.
